

Protect employee hearing health

Workers facing daily exposure to hazardous noise levels risk developing noise-induced hearing loss. Hearing loss carries many negative consequences for the employee and employer alike. For example, loss of ability to work, compensation claims and last but not least all the everyday problems associated with permanent hearing loss.

Managing noise levels and providing ear protectors in the workplace goes a long way. Additionally, regular hearing tests provide the necessary certainty that the employees' hearing is good and healthy. Hearing tests are mandatory in many places where workers are exposed to noise. Oscilla makes it easy to implement or improve hearing tests as part of an occupational healthcare program.

Choose Oscilla for occupational hearing screening:

Ease of use

Oscilla audiometers are so easy to use, they require little training and will easily fit into existing procedures and workflows.

Optimise your workflow

Performing health checks on many employees on a daily basis can be a challenge. Oscilla audiometers feature automatic tests making it much simpler for the tester. This saves time and helps increase throughput.

A smart solution for the clinic or on the go

Occupational healthcare professionals often travel to different sites. Oscilla audiometers are compact and designed for daily transportation.

USB310 / USB330 PC-based screening audiometers
